OSHA's New Steel Erection Standard Safety Presentation CD-ROM

This Power Point presentation has over 100 illustrated slides of OSHA's new Subpart R for Steel Erection.

Points Covered Include:

- Design components to stabilize the frame and how they affect the erection process.
- Controlling contractor language and the potential multi-employer liabilities.
- Notification to begin steel erection requirements
- Crane & Hoisting issues
- Fall Protection Requirements
- Custody of perimeter protection.

The Presentation provides questions to help solicit discussion on controversial parts of the standard. It looks at how failure to document or follow sections of the standard which may not be under an individual contractor's control could affect them. It identifies the safety pitfalls for the use of plans or fall arrest options above 15 feet.

The presentation uses Microsoft's Power Point7 presentation software which you must have to use this product. Files can be loaded onto your own computer for company customization. Programs can be used as presentation materials, printed as handouts or used as individual slides.

Additional materials include a copy of the standard in MS-Word format, the complete preamble in Federal Register (Adobe) Format, and checklists for use with the standard.

| Presentation | Price (ea) | No. | Total Cost |
|--------------------------------------|------------|-----|------------|
| OSHA's New Steel Erection Standard | \$100 | | |
| Cost of all Materials | | | |
| Wisconsin Residents add 5% sales tax | | | |
| Shipping & handling | | | \$7.00 |
| Total Cost | | | |
